Data

To solve this problem, I will need below data:

- List of neighborhoods in Toronto, Canada.
- Latitude and Longitude of these neighborhoods.
- Venue data related to Bakery. This will help us find the neighborhoods that are most suitable to open a Bakery.

Extracting the data

- Scrapping of Toronto neighborhoods via Wikipedia.
- Getting Latitude and Longitude data of these neighborhoods via Geocoder package or using a csv file.
- Using Foursquare API to get a venue data related to these neighborhoods.
